

Duo Beyond

The Most Comprehensive Platform for BYOD and Cloud Security

With Duo Beyond, organizations can build a Trusted Access platform based on the identity of users and security of their devices to provide a consistent user experience while accessing cloud or on-premises applications.

Duo Beyond is the first commercial implementation of BeyondCorp — here's how it works:

Explore Everything in Duo Beyond

Identify Trusted Devices

With Duo's Trusted Endpoints feature available in Duo Beyond, you can:

- Identify between company-owned and personal laptops accessing your corporate applications
- Control different levels of access based on who manages the device
- Easily deploy a Duo certificate on your company laptops to mark them as 'Trusted' using Duo's public key infrastructure (PKI)

Secure Single Sign-On

Give your users secure remote access to cloud and on-premises apps without using a virtual private network (VPN) – plus, you can enforce granular policies to control user and device access to certain apps.

Complete Device Visibility

Gain insight into the security hygiene of your endpoints with Duo's Device Insight, and identify devices that are out of date or have poorly configured security settings. Create policies to block or warn users to update their own devices.

Assess Your Risk of Credential Theft

Quickly identify vulnerable users in your organization by launching targeted phishing simulations, and continuously measure and monitor your risk of getting phished.

Easy-to-Use Two-Factor Authentication

Protect against attacks targeting stolen user credentials with Duo's user-friendly two-factor authentication. Duo's mobile authentication app, Duo Mobile, provides push notification-based approval to quickly verify your user's identity via smartphones, smartwatch and U2F tokens.

Duo Beyond is available for \$9/user/month. Learn more at duo.sc/beyond.

We were previously trying to do this through a combination of five other products; the fact that one product can provide this level of granular access control is really awesome.”

Steve Myers, Head of Security

The Most Loved Company in Security

Duo Security makes security painless, so you can focus on what's important. Duo's scalable, cloud-based Trusted Access platform addresses security threats before they become a problem. Thousands of organizations worldwide use Duo, including Facebook, Toyota, Panasonic and MIT. Duo is backed by Google Ventures, True Ventures, Radar Partners, Redpoint Ventures and Benchmark. Duo is located from coast to coast and across the sea.
