

We are Duo, and we're here to democratize security for everyone. Our mission is to protect the mission of our customers like Facebook, Twitter, and Etsy by making security simple.

We're a diverse crew of makers and builders, skaters and coders, filmmakers and DJs, teachers and students brought together by a shared belief in adding value to the world. This diversity allows us to bring an empathetic approach to solve some of the most complex global business and security challenges faced today.

What you'll do...

As a **Product Management Intern for Authentication**, you will help take Duo's core services to the next level. You will be responsible for building highly usable and delightful workflows for administrators and end-users alike. In this role, you will collaborate with various stakeholders from engineering, design, customer success, sales and senior management to help deliver a new authentication experience for all of our customers.

Even as an intern, Product Managers play a highly visible role in the company and are critical to the development and execution of Duo's product strategy. As PMs, we practice what we preach; we validate use cases for problems our customers help us identify; we collaborate on the design of solutions to those problems; we iterate and test those designs, and we do so in an agile framework.

Skills you have...

You have at least 1 year prior work experience, and...

- BA/BS preferably in the fields of computer science, engineering, design or mathematics.
- Current enrollment in an accredited degree granting graduate program.
- A natural interest in web technologies and/or security, either by direct work experience or personal passion.
- Most importantly, you're hungry to learn new skills and solve real user problems.

3 Reasons why you should apply...

- You possess a highly driven and entrepreneurial personality, with an ability to get stuff done while having a sharp mind and eye for detail.
- You're technically savvy and want to learn product management through direct experience.

- You are passionate about providing the world's best multi-factor experience for administrator and end-users alike!

This job may not be for you if...

- If the pace of a fast-moving, high growth company makes you uncomfortable, or if you need a lot of well established policies and procedures before you can make decisions and drive results, this might not be the best role for you.
- If you don't have any familiarity with at least one of the following: SaaS, endpoint management, network operations, IT security, mobile device management, cloud operations, application security, or identity and access management.
- You are not comfortable with communicating with multiple stakeholders, both internal, on an ongoing basis to keep perspective with customers and share it with your peers!

Does this sound like it was written for you?

Excellent! Please apply and let's explore this together.
