

Product Design Intern, UX Engineering

What you'll do...

As a **Product Design Intern**, you'll be working on mission-critical design solutions with a team that's invested in your work. You'll get valuable experience as a core member of the team, and your work will be impactful from the start. As part of the Product Design Team, you will contribute directly to the design of product features and work with the design research team to plan and assist in user research. In this role you will collaborate closely with engineering, design, and product management.

Skills you have...

- Current enrollment in a graduate level Interaction Design program or related field
- Experience creating design solutions that address user needs, business goals and acknowledge technology constraints
- Amazing written and oral communication skills. Attentive to details, quality, and accuracy
- Superb collaboration, social, and relationship management abilities
- Self-motivated and capable of working independently
- Familiarity or experience with design research, visual design, and software development processes is a plus.
- Experience with common design tools like Sketch and Invision is preferred.
- Proven ability to quickly learn new design tools, software, and methods.

Reasons why you should apply...

- You love creating design solutions that address real customer needs.
- You're curious about what the future of security means for businesses and end users. For instance, how can we simplify a user login flow by eliminating passwords?
- You aspire to make meaningful improvements to the lives of individuals, teams, and companies who use our product every day to do their most important work.
- You are seeking to understand how design operates within real world constraints.

Internship Details...

- This role will be based out of our Ann Arbor, Michigan office
- Program dates are May 18, 2020 - August 14, 2020

- Roles are full time and 40 hours per week, Monday - Friday
- Generous pay and employee perks
